

Invisacta

CONCEALED HINGES

WARNING!

INSTALLATION DEVICE PROTECTED BY PATENT

Only (by) using **INVISACTA**, you can avoid to **cut the cover strips** (in green), thanks to the only 21 mm depth of the hull on the frame side (fig. 1), and **at the same time** install the hinge in the middle of the door thickness (fig. 2) **making the door become both left and right, that means reversible** (fig. 3).

There are unoriginal INVISACTA hinges on the market; that don't have the license to use OTLAV patent.

Producing doors as shown herein, with unoriginal **INVISACTA** hinges, **means to make an injury to OTLAV patent rights**, injury which is punishable both civilly and criminally.

**European Patent
EP-B-2719851
16/04/2014**

INVISACTA hinge is reversible, which makes the door reversible also vertically (fig. 4).

*Since **1956**, thanks to our hinges, more than **1,000,000,000**
doors are opening **in 80 countries** all over the world.*

COMPANY

OTLAV S.p.A produces and sells hinges for doors and windows and other accessories for frames.

Founded in 1956 by entrepreneur Angelo Padovan, Otlav has produced **more than 2,2 billion of hinges**.

Thanks to almost 100 filed patents, Otlav ensures high quality standards and is present with its wide range of products in more than **80 countries worldwide**.

OTLAV new factory was inaugurated in 2007, in Via Angelo Padovan 2 in Santa Lucia di Piave (TV), in an area of 45,000 square meters, 19,500 of which are covered.

In 2021, due to the continuous increase in demand and the need to store large quantities of raw materials, a 2,200 m² warehouse was purchased next to the production site;

In 2023, the 6,000 m² expansion work on the east side was completed. In 2025, an additional 4,500 m² warehouse was purchased on the west side. The current area occupied by OTLAV plant is 73,000 m², of which 32,000 are covered. **In four years, Otlav production surface has increased by 66%.**

Following the opening of the first office in March 1956, OTLAV has nowadays found its perfect location to face the challenges of the new millennium. "OAMH" "Otlav Automatic Material Handling" is a project developed after five years of research and studies all around the world; a technological jewel created by designing at first the best logistical location, and then a subsequent lay out, and eventually the container to cover these structures: an unmistakable technological masterpiece, which is 20 meters high.

Rationalization of space, optimization of logistics and integrated use of automation: all of these account for respectively the flow or transportation of materials and the streaming of information. The goal is to cut costs by making the produced hinges increasingly competitive with an unparalleled level of quality.

OTLAV group companies

In 1990 Otlav creates Myrtus in Maniago (PN), Friuli. The company is specialized in galvanic treatments.

Founded 2002 in Romania is focused on some high-tech producing processes.

As required by European regulations and by Regulation (EU) No. 305/2011 all OTLAV hinges are subjected to stringent resistance tests to check performance both during the design phase and regularly during manufacturing. The I.U.S. (Intensive Use Simulator) is the testing system used in the OTLAV Test Laboratories.

EC Certificates and Performance Declarations

Tests on the hinges are also carried out at external bodies able to certify that the company manufactures according to rigid, systematically monitored production plans and that the products pass the tests envisaged by the standard UNI EN 1935/2004: they are thereby able to issue, if needed, the CE certificate or certify the data provided by OTLAV in the "performance declarations".

View of the OTLAV test laboratories I.U.S. (Intensive Use Simulator)

INVISACTA PLUS+

7 JUNCTION FULCRUMS

No sliding wear

7 fulcrum points allow little friction, good flow, solidity and high loading capacity; no contact between the different bearing units thanks to nylon bushes with high friction resistance.

3 ADJUSTMENTS

With only one hex spanner

The clamping screws, placed in the outer casings, are not used for hinge adjustment, therefore they **remain stable for a long time.**

Technical data

Capacity*	200 Kg
Hinge height	250 mm
Width shutter side	34 mm
Width frame side	34 mm
Depth shutter side	50 mm
Depth frame side	37,5 mm
Door opening angle	180°
Side adjustment	± 2,5 mm
Height adjustment	± 3 mm
Depth adjustment	± 1 mm

* Tested with 90x210 cm doors - For more information on the number of hinges to be used according to the weight and dimension of the door, please see the loading charts available on the website www.otlav.it.

Technical features

- Movement on **7 junction fulcrums** equipped with bearing in plastic HT with high resistance and long life.
- Equipped with **3-way progressive adjustment** that can be settled by means of just one 4 mm hex-spanner. Once installed, the door has natural sinking, Invisacta hinge allows to set the door back to the start position.
- The **height adjustment** is equipped with a **safety device** that prevents the door from accidentally sliding.
- Outer casings protect the inner junction fulcrums against rubble coming from door installation works.
- The clamping screws, placed in the outer casings, are not used for hinge adjustment, therefore they remain stable for a long time.
- Reversible
- Material of levers: aluminum.
- Material of casing: zamak.
- Equipped with steel caps to conceal the adjustment screws.

IN303 3D concealed hinge for 80 Kg doors

Technical data

Capacity*	80 Kg
Hinge height	120 mm
Width shutter side	30 mm
Width frame side	30 mm
Depth shutter side	30 mm
Depth frame side	21 mm
Door opening angle	180°
Side adjustment	± 1 mm
Height adjustment	± 2 mm
Depth adjustment	± 1 mm

* Tested with 90x210 cm doors - For more information on the number of hinges to be used according to the weight and dimension of the door, please see the loading charts available on the website www.otlav.it.

PATENTED

Reversibility

IN303 hinge allows at the same time:

Reversibility of the door with hinge mounted in the center of the door thickness.

No need to cut the architrave thanks to only 21 mm of frame slot depth.

Patented EP-B2719851.

Technical features

- A 21 mm depth slot on the frame side makes it unique and enables its **perfect integration in reduced spaces**. No need to cut the architrave which can be flush mounted.
- The hinge is reversible, if mounted in the center of the door thickness, allows the **reversibility of the door**, thus enabling the optimization of the stock and logistics at installation.
- Movement on **7 junction fulcrums** equipped with bearing in plastic HT with high resistance and long life.
- Equipped with **3-way adjustments** that can be settled by means of just one 3 mm hex-spanner. Once installed, the door has natural sinking, Invisacta hinge allows to set the door back to the start position.
- During the installation it is possible to **unlock the height adjustment** of the frame part, creating a 4 mm gap, which makes it **easier to insert the hinge** in the slots of the jamb. This is particularly useful in the event that the frame milling are not perfectly aligned with those of the door.
- Outer casings protect the inner junction fulcrums against rubble coming from door installation works.
- The clamping screws, placed in the outer casings, are not used for hinge adjustment, therefore they remain stable for a long time.
- **The hinge can be fitted with door closing devices.**
- Material of levers: aluminum.
- Material of casing: zamak.
- **CE certified** - according European Assessment Document 020001-01-0405.
- **Fireproof certified 45'** according UNI-EN 1634-1.

IN235 3D concealed hinge for 40 Kg doors

Technical data

Capacity*	40 Kg
Hinge height	120 mm
Width shutter side	23 mm
Width frame side	23 mm
Depth shutter side	30 mm
Depth frame side	21 mm
Door opening angle	180°
Side adjustment	± 1 mm
Height adjustment	± 2 mm
Depth adjustment	± 1 mm

* Tested with 90x210 cm doors - For more information on the number of hinges to be used according to the weight and dimension of the door, please see the loading charts available on the website www.otlav.it.

Technical features

- A **21 mm depth slot** on the frame side makes it unique and enables its perfect integration in reduced spaces. No need to cut the architrave which can be flush mounted.
- Movement on **7 junction fulcrums** equipped with bearing in plastic HT with high resistance and long life.
- Equipped with **3-way adjustments** that can be settled by means of just one 3 mm hex-spanner. Once installed, the door has natural sinking, Invisacta hinge allows to set the door back to the start position.
- During the installation it is possible to **unlock the height adjustment** of the frame part, creating a 4 mm gap, which makes it **easier to insert the hinge** in the slots of the jamb. This is particularly useful in the event that the frame milling are not perfectly aligned with those of the door.
- Material of hinge: Zamak.
- Material of casing: thermoplastic polymer.
- The hinge is reversible.
- Outer casings protect the inner junction fulcrums against rubble coming from door installation works.
- The clamping screws, placed in the outer casings, are not used for hinge adjustment, therefore they remain stable for a long time.
- IN230, IN232, IN235 and IE236 models **use the same milling**.
- **Aluminium caps** available to conceal the screws.
